

WashFold Orlando

Complete Order Processing Guide

Full operational SOP from customer booking to delivery. Read top to bottom for the complete flow.

Background: How Routes Work

Before processing any order, understand the route structure — this controls which dates customers can book and which orders appear on a given day.

Routes live at: /admin/routes

Each route defines:

- **Name** — e.g. "East Orlando Route", "Airport Route"
- **Pickup days** — which days of the week pickups run
- **Delivery days** — which days deliveries run
- **Turnaround days** — minimum gap between pickup and delivery (set to 1 for next-day)
- **Recurrence** — Weekly, Biweekly, or Both
- **Service areas** — zip codes or neighborhoods this route covers
- **Home facility** — which warehouse handles this route's orders
- **Time windows** — e.g. 9am–1pm, 3pm–7pm (customers pick from these when booking)

Routes are the backbone of the booking calendar. If a customer can't find a date, it means no active route covers their zip code on that day.

To add or edit a route: go to /admin/routes → click the route to expand → edit fields → Save.

To pause a route temporarily (e.g. holiday): toggle the route OFF. Customers will no longer see those dates.

Background: How Workers & Shifts Work

Workers live at: /admin/workers

Workers go through an approval flow:

1. Worker applies at /apply — selects role (Driver or Washing Operator), submits personal info + signs IC agreement
2. Admin reviews at /admin/workers (Pending tab) — clicks **Approve** or **Reject**
3. Once approved, admin sets a **4-digit PIN** for the worker — they use this to log into their app
4. Worker status becomes **Active**

Schedule & shifts: /admin/schedule — 3 tabs:

- **Right Now** — shows who is currently clocked in, running duration. Can force clock-out from here.
- **Schedule** — weekly calendar. Add shifts by selecting worker + day + time range.
- **Timesheet** — full punch history. Edit or correct punches if a worker forgot to clock in/out.

Workers clock in/out at /staff (PIN-gated). This is separate from the driver and operator apps.

STEP 1

Customer Places Order

Who	Where
Customer (self-service)	Customer-facing booking form on the website

The customer:

1. Enters their address
2. Selects service type (Wash & Fold, Comforter Wash, Wash Only)
3. Picks a pickup date — only days with active routes are shown
4. Picks a pickup time window (e.g. 9am–1pm or 3pm–7pm)
5. Picks a delivery date — must be at least next day (or Monday if pickup is Saturday)
6. Picks a delivery time window
7. Enters contact info, number of bags/comforters, any special notes
8. Submits — receives a booking confirmation

What the system creates:

- New booking record with status: pending
- Short code assigned (e.g. WF004)
- Not yet assigned to any driver or Shipday route

Where you see it immediately:

- Admin landing /admin — Pending counter increases
- Dispatch board /admin/dispatch — appears on the pickup date column

STEP 2

Admin Reviews the New Order

Who	Where
Admin	/admin/dispatch (primary) or /admin/orders

Check the Dispatch Board Daily

Open /admin/dispatch — defaults to today. Use date navigation arrows to check upcoming days.

The board has two columns:

- **Pickups** — orders being picked up today, grouped by time window (9AM–1PM first, then 3PM–7PM)
- **Deliveries** — orders being delivered today

Each order card shows: short code, customer name, address, phone, service type, bag count, current status, and Shipday sync badge.

Confirm the Order

Click **View order** on the card, or go to `/admin/orders/[id]`.

- Review service details, address, dates
- Change status from **Pending** → **Confirmed** — sends the customer a confirmation notification
- Verify the address is in a covered zip code
- Verify pickup/delivery dates align with an active route

If the address or dates look wrong, you can edit from this page or contact the customer.

STEP 3

Assign the Order to Shipday (Routing)

Who	Where
Admin	<code>/admin/dispatch</code>

Shipday is the third-party routing/dispatch platform. Orders must be in Shipday for the driver to see them.

Each order card shows a **Shipday sync badge**:

- **Amber** — **"Not in Shipday"**: order hasn't been pushed yet; driver won't see it
- **Green** — **"SD #12345"**: order is synced and has a Shipday order ID

Orders are pushed automatically when confirmed, but verify the green badge. If still amber, the sync failed — open the order and re-trigger the push.

STEP 4

Assign a Driver to the Order

Who	Where
Admin	<code>/admin/dispatch</code> — directly on each order card

Once the order is in Shipday (green badge), assign a driver:

1. Find the order card on the Dispatch Board
2. In the bottom action bar, type the **driver's email address** into the field
3. Click **Assign**
4. A confirmation toast ("Driver assigned") confirms it went through
5. The driver will now see this stop in their Shipday app

The driver's email must match their account in Shipday. If assignment fails with "carrier may not exist," the driver is not yet registered in Shipday.

Assigning multiple orders to the same driver: Repeat for each card. All stops go to one route in Shipday.

Changing a driver: Type a different email and hit Assign again. This overwrites the previous assignment.

STEP 5

Driver Out of Shift / Coverage Issue

If a driver calls out, is late, or is unavailable:

Option A — Reassign to a Different Driver

On each of their order cards on the Dispatch Board, type the replacement driver's email and click **Assign**. This instantly redirects stops in Shipday.

Option B — Reschedule the Orders

If no coverage is available:

1. On each order card, click **Reschedule...**
2. A popover appears — change the date and/or time window
3. Click **Update + Shipday** — updates the booking AND Shipday simultaneously
4. WashFold notifies the customer of the date change

Pick a date with an active route in the same area. Check /admin/routes if unsure which days cover which zip codes.

Option C — Remove from Routing Temporarily

1. On the order card, click **Remove routing** (red button, only shows when synced)
2. Removes it from Shipday — driver won't see it — but booking stays active
3. Re-push to Shipday and reassign once coverage is confirmed

Checking Who Is Currently Working

Go to /admin/schedule → **Right Now** tab — shows everyone clocked in and how long they've been on shift.

STEP 6

Driver Performs the Pickup

Who	Where
Driver	/driver — enter PIN to see today's assigned stops

1. Opens the Driver App, enters their 4-digit PIN
2. Sees assigned pickups for the day — each with customer name, address, time window
3. Navigates to each address (app links to maps)
4. At the customer's door, collects all laundry bags

5. In the app, opens the order → marks it **Picked Up** (status → picked_up, event logged with timestamp)
6. Continues to next stop

If a customer is not home, the driver notes it in the app. Admin contacts the customer and reschedules.

STEP 7

Driver Drops Off at the Facility

Who	Where
Driver	Driver App → order detail

1. Driver arrives at the facility
2. For each order, opens the order in the app
3. Optionally enters bag weight (used for pricing adjustments)
4. Marks order as **Dropped at Warehouse** — status → in_progress, phase → intake

The order now appears on the Facility Board at /admin/facility in the Intake column. It is now in the operator's hands.

STEP 8

Operator Processes Through Facility Phases

Who	Where
Operator	/operator (Operator App) — enter PIN
Admin (view only)	/admin/facility

The Facility Board shows all active orders in columns by phase. The operator moves laundry physically and advances each order in the app to match.

Phase	What Physically Happens	How to Advance
Intake	Order received, verified, bag count checked	Open card → Advance
Washing	Bags loaded into washers	Open card → Advance
Drying	Transfer to dryers	Open card → Advance
Folding	Items folded, counted, rebagged	Open card → Advance

Same-color warning: The board shows a warning if two adjacent orders in the same column share a color key. Reassign one before advancing.

STEP 9

Finishing: Color Key, Bag Count & Floor Photo

Who	When
Operator	After Folding — MANDATORY before marking Ready

A) Assign a Color Key Sticker

1. Open the order card → find the **Color Key** selector (10 colored circles)
2. Pick a color not already used by an adjacent order in the same column
3. Tap the circle to assign it in the app
4. Physically apply the matching label sticker to the outside of the bag(s)

Available colors: Red, Blue, Sky Blue, Green, Lime, Pink, Hot Pink, Orange, Yellow, Purple

BLOCKED: The system will not allow advancing to Ready without a color key assigned. No workaround.

B) Enter Folded Bag Count

Enter how many bags the laundry was packed into after folding. This may differ from the original pickup bag count. The driver's app will warn if counts don't match.

C) Take the Placement Photo

1. Place the finished, labeled bag(s) in their spot on the facility floor
2. Tap the Camera button in the order drawer
3. Photograph the bags clearly, including the color sticker
4. Photo is uploaded and saved — it appears on the driver's screen for locating bags

BLOCKED: The system will not allow advancing out of Ready/Staged without a floor photo. Must be done before moving further.

STEP 10

Floor vs. Storage Decision

Who	When	Where
Operator	Immediately after marking Ready	Facility Board order drawer

Every finished order needs a location decision — where does it sit until the driver picks it up?

Option A — Hold at Facility (Floor)

Toggle **Hold at Facility** ON.

- Order stays in the floor holding area at the facility
- Driver comes directly to the facility to pick it up
- **Sticker requirement:** color key sticker only
- Card shows a pin icon on the board

Option B — Remote Storage

Toggle **Hold at Facility** OFF.

- Order goes to remote/off-site storage
- Driver must go to the storage location to retrieve it
- **Sticker requirement:** color key sticker + second marker sticker (storage identifier — color TBD)
- Order drawer shows amber reminder: "Second marker sticker required"

Saturday pickups: Pending decision on whether they go to storage automatically or stay on the floor. Use your judgment until decided.

STEP 11

Driver Views Specs and Collects the Order

Who	Where
Driver	Driver App → order detail page

When an order is Ready or Staged, the driver's app shows a **Facility Specs panel**:

What the driver sees	What it means
Floor or Storage label	Where to go to find this order
Colored circle + color name	Which sticker to look for on the bag
Placement photo	Visual reference — use this to locate the exact bags
Folded bag count	How many bags to pick up (warning if different from pickup count)

Driver collection steps:

1. Arrives at facility (or storage location)
2. Opens the order in the app — views color circle and placement photo
3. Finds correct bags (matching color sticker)
4. Counts bags — verifies against folded bag count shown in app
5. Loads bags into vehicle
6. Marks order as **Out for Delivery** — phase → out_for_delivery

STEP 12

Driver Delivers to the Customer

Who	Where
Driver	Driver App

1. Opens the app — sees all deliveries assigned for the day
2. Navigates to each customer's address
3. Drops off the bags at the door (or hands to customer)

4. Marks order as **Delivered** — status → delivered, customer notified

If customer is not home: leave bags in a safe spot if authorized, or note in the app and contact admin. Admin can mark delivery manually from the order detail page.

STEP 13

Admin Closes Out / Follows Up

Who	Where
Admin	/admin/orders or /admin/search

After delivery:

- Verify the correct status shows as delivered
- Review final amount — confirm pricing reflects any weight adjustments
- Check for any tip recorded
- Flag issue orders (damaged items, wrong bag count, customer complaint) for follow-up

If a customer reports a problem:

- Go to /admin/search → search by name, phone, or short code
- Open the order → review the full event log (every status change is time-stamped)
- The floor placement photo is on record — use it to verify what was delivered

Quick Reference

Full Status Flow:

Booking placed → confirmed → picked_up → in_progress → delivered

Facility Phase Flow:

intake → washing → drying → folding → [color key + bag count + photo] → ready → staged → out_for_delivery

Task	Role	Where
Review & confirm new orders	Admin	/admin/dispatch
Assign driver to order	Admin	/admin/dispatch — order card
Reschedule an order	Admin	/admin/dispatch → Reschedule...
Check who is clocked in	Admin	/admin/schedule → Right Now
Add / edit routes	Admin	/admin/routes
Approve new workers	Admin	/admin/workers → Pending tab
Add worker to schedule	Admin	/admin/schedule → Schedule tab

Pick up laundry	Driver	/driver
Drop off at facility	Driver	/driver
Deliver to customer	Driver	/driver
Move order through phases	Operator	/operator
Assign color key	Operator	/operator (Facility Board)
Take placement photo	Operator	/operator (Facility Board)
Set Floor vs Storage	Operator	/operator (Facility Board)

App	URL	Login method
Admin	/admin	Admin password
Driver	/driver	4-digit PIN
Operator	/operator	4-digit PIN
Staff Clock	/staff	4-digit PIN
Test Hub (3-device test)	/admin/test	Auto-seeds test workers

PINs are set by admin at /admin/workers → click the worker → set PIN. The worker uses this PIN every time they open their app.
