

WashFold Orlando

Complete Order Processing Guide

Full operational SOP from customer booking to delivery

BACKGROUND: How Routes Work

Before processing any order, understand the route structure — this controls which dates customers can book and which orders you see on a given day.

Routes live at: /admin/routes

Each route defines:

- **Name** — e.g. "East Orlando Route", "Airport Route"
- **Pickup days** — which days of the week pickups run (e.g. Monday + Wednesday)
- **Delivery days** — which days of the week deliveries run (e.g. Tuesday + Thursday)
- **Turnaround days** — minimum gap between pickup and delivery (set to 1 for next-day)
- **Recurrence** — Weekly, Biweekly, or Both
- **Service areas** — zip codes or neighborhood names this route covers
- **Home facility** — which warehouse/facility handles this route's orders
- **Time windows** — e.g. 9am–1pm, 3pm–7pm (customers pick from these when booking)

■ Routes are the backbone of the booking calendar. If a customer can't find a date, it means no active route covers their zip code on that day.

To add or edit a route: /admin/routes → click the route to expand → edit fields → Save.

To pause a route temporarily (e.g. holiday): /admin/routes → toggle the route OFF.

BACKGROUND: How Workers & Shifts Work

Workers live at: /admin/workers

Workers go through an approval flow:

- Worker applies at /apply — selects role (Driver or Washing Operator), submits personal info + signs IC agreement
- Admin reviews at /admin/workers (Pending tab) — clicks **Approve** or **Reject**
- Once approved, admin sets a **4-digit PIN** for the worker — they use this to log into their app
- Worker status becomes **Active**

Schedule & shifts: /admin/schedule

The schedule page has 3 tabs:

- **Right Now** — shows who is currently clocked in, when they clocked in, running duration. You can force clock-out from here.
- **Schedule** — weekly calendar. Add shifts by selecting worker + day + time range.
- **Timesheet** — full punch history. Edit or correct punches if a worker forgot to clock in/out.

Workers clock in/out using the **Staff Clock** at /staff (PIN-gated). This is separate from the driver and operator apps.

■ If a driver is out sick or unavailable: see the "Driver Out of Shift" section below.

STEP 1 — Customer Places Order

Who does it: Customer, self-service **Where:** Customer-facing booking form on the website

The customer:

- Enters their address
- Selects service type (Wash & Fold, Comforter Wash, Wash Only)
- Picks a pickup date — only days with active routes are shown
- Picks a pickup time window (e.g. 9am–1pm or 3pm–7pm)
- Picks a delivery date — must be at least next day (or Monday if pickup is Saturday)
- Picks a delivery time window
- Enters contact info, number of bags/comforters, any special notes
- Submits — receives a booking confirmation

What the system creates:

- New booking record with status: *pending*
- Short code assigned (e.g. WF004)
- Booking is not yet assigned to any driver or Shipday route

Where you see it immediately: Admin landing page /admin — counter increases on the Pending stat card. Dispatch board /admin/dispatch — appears on the pickup date column.

STEP 2 — Admin Reviews the New Order

Who does it: Admin **Where:** /admin/dispatch (primary) or /admin/orders

Check the Dispatch Board Daily

Open /admin/dispatch — it defaults to today's date. Use the date navigation arrows to check upcoming days.

The board is split into two columns:

- **Pickups** — orders being picked up on this date, grouped by time window (9AM–1PM first, then 3PM–7PM)
- **Deliveries** — orders being delivered on this date

Each order card shows: Short code, customer name, address, phone; Service type, bag count; Current status (dot color: blue=confirmed, orange=in progress, green=out for delivery); Whether it's synced with Shipday.

Confirm the Order

Go to the full order detail: click **View order** on the card, or go to /admin/orders/[id]. From the order detail page:

- Review service details, address, dates
- Verify the address is in a covered zip code — check against /admin/zip-codes
- Verify pickup/delivery dates align with an active route — Mon, Wed, or Fri, 9:00 AM – 3:00 PM window
- Once both checks pass, change status from **Pending** → **Confirmed** — this sends the customer a confirmation notification

■ If the address or dates look wrong, you can edit from this page or contact the customer before confirming.

STEP 3 — Assign the Order to Shipday (Routing)

Who does it: Admin **Where:** /admin/dispatch

Shipday is the third-party routing/dispatch platform. Orders need to be pushed to Shipday so the driver gets a route on their phone.

On the Dispatch Board, each order card shows a **Shipday sync badge**:

- **"Not in Shipday"** — order hasn't been pushed yet; driver won't see it
- **"SD #12345"** — order is synced; Shipday order ID shown

■ Orders are pushed to Shipday automatically when they are confirmed, but you should verify the green badge is showing. If it's still amber, the sync may have failed — open the order and re-trigger the push.

STEP 4 — Assign a Driver to the Order

Who does it: Admin **Where:** /admin/dispatch — directly on each order card

■ **You can do this step ahead of time.** Driver assignment does not require the driver to be clocked in. It is common to pre-plan and assign all orders the day before a route runs.

Once the order is in Shipday (green badge), assign a specific driver:

- Find the order card on the Dispatch Board
- In the bottom action bar of the card, select a driver from the **dropdown**
- Click **Assign**
- A confirmation toast ("Driver assigned") confirms it went through
- The driver will see this stop in their Shipday app when they open it on route day

■ If the driver does not appear in the dropdown, they may not yet be approved. Go to /admin/workers → Pending tab → Approve them first.

Assigning multiple orders to the same driver: Repeat the process for each order card. All orders assigned to the same driver will be grouped into one route in Shipday.

Changing a driver after assignment: Select a different driver from the dropdown and hit Assign again. This overwrites the previous assignment in Shipday.

STEP 5 — Driver Out of Shift / Coverage Issue

If a driver calls out, is late, or is unavailable for their shift:

Option A — Reassign to a Different Driver

On each of their order cards on the Dispatch Board, select the replacement driver from the dropdown and click **Assign**. This instantly redirects the stops in Shipday to the new driver.

Option B — Reschedule the Orders

If no coverage is available:

- On each order card, click **Reschedule...**

- A popover appears — change the date and/or time window
 - Click **Update + Shipday** — this updates the booking AND updates Shipday simultaneously
 - WashFold notifies the customer of the date change
- Reschedule to the next available route day — pickups and deliveries only run **Monday, Wednesday, and Friday**, 9:00 AM – 3:00 PM.

Option C — Remove from Routing Temporarily

- On the order card, click **Remove routing** (red button, only shows when synced)
- This removes it from Shipday — driver won't see it — but keeps the booking active
- Re-push to Shipday and reassign once coverage is confirmed

Checking Who Is Currently Working: Go to /admin/schedule → **Right Now** tab — shows everyone clocked in and how long they've been on shift.

STEP 6 — Driver Performs the Pickup

Who does it: Driver **Where:** /driver — enter PIN → see today's assigned stops

On pickup day, the driver opens the Driver App (/driver), enters their 4-digit PIN, and sees all assigned pickups with customer name, address, and time window.

At each stop, the driver follows this sequence:

1. **Navigate to the address** — the app links directly to maps
2. **Locate the bags** — find where the customer left them (door, porch, etc.)
3. **Verify bag count** — compare what is physically there against the order. Adjust in the app before confirming if count differs
4. **Check the assigned color key** — the app displays a pre-assigned color for this order (e.g., "Use the BLUE sticker"). System automatically assigns a unique color per order — no manual selection needed
5. **Create the labels** — write the order code and bag number on the assigned-color sticker for each bag (e.g., WF004 · B1, WF004 · B2). The app shows the label reference — tap **Full** to expand bag by bag
6. **Apply stickers** — place each sticker visibly on the outside of the correct bag
7. **Take a photo** — photograph all bags with stickers clearly visible. **REQUIRED** — the app blocks confirmation without it
8. **Load the vehicle** — keep all bags for the same order together
9. **Confirm Pickup** in the app — status moves to picked_up, customer receives SMS notification

■ If a customer is not home or the bags are not out, note it in the app and contact admin. Admin will reach out to the customer and reschedule.

■ **Color key rule:** The system pre-assigns a unique color per order at booking time, cycling through 10 colors (Red, Blue, Sky Blue, Green, Lime, Pink, Hot Pink, Orange, Yellow, Purple) to avoid duplicates on the same pickup day. The driver simply matches the sticker to the color shown — no decision needed.

STEP 7 — Driver Drops Off at Warehouse or Facility

Who does it: Driver **Where:** Driver App → order detail

After completing all pickups, the driver brings the bags to the drop-off point indicated in the app (warehouse or facility, depending on the route).

At the drop-off point, the driver follows this sequence:

1. **Arrive at the drop-off location** — the app shows whether this order goes to the **Warehouse** or directly to the **Facility**
2. **Place the bags** — set them in the designated area, keeping each order's bags together (use color key to identify)
3. **Weigh each bag** — enter the weight per bag on the scale. **REQUIRED** — the app will not allow confirmation without weights for all bags. Weight locks in final customer billing
4. **Take a location photo** — photograph the bags in the spot where you placed them. This photo is **internal only** — not visible to the customer, but recorded for operational control
5. **Confirm Drop-off** — tap Confirm Warehouse Drop-off (or Confirm Facility Drop-off). Status moves to at_warehouse or at_facility. The order now appears on the Facility Board for the operator

At this point, **the order is in the operator's hands**.

■ The Facility Board at /admin/facility will show the order in the **Intake** column once dropped.

■ **Warehouse vs. Facility:** Most routes currently go through the WashFold Warehouse first, then a transport run moves bags to the laundry facility. If a route drops directly at the facility, the app will show "Facility" as the drop-off destination.

STEP 8 — Operator Processes the Order Through Facility Phases

Who does it: Operator **Where:** /operator (Operator App) — enter PIN

Also visible to Admin at: /admin/facility

The Facility Board shows all active orders in columns by phase. The operator physically moves laundry through the facility and advances each order in the app to match.

To advance a phase: open the order card on the Facility Board → review details → tap **Advance** → **[Next Phase]** at the bottom of the drawer → card moves to the next column.

Phase 1 — Intake

1. Receive the bags from the driver drop-off
2. Locate the order on the Facility Board — find it by **order code** and **color key sticker** on the bags
3. Verify the **bag count** matches what is recorded in the app. If there is a discrepancy, note it before advancing
4. Confirm the **color key sticker** is visible and legible on each bag
5. Advance the order to **Washing** in the app

Phase 2 — Washing

1. Open the bags and load the contents into the washer(s)
2. **Select and record which washer(s) you are using** in the app — required for tracking
3. Set the appropriate wash cycle for the service type
4. Start the machines
5. Advance the order to **Drying** in the app once washing is complete

Phase 3 — Drying

1. Transfer items from the washer(s) to the dryer(s)
2. **Select and record which dryer(s) you are using** in the app — required for tracking
3. Set the appropriate dry cycle

4. Start the machines
5. Once dry, **transfer everything into a laundry cart** — lay loosely to avoid wrinkles
6. **Roll the cart next to the folding table** and advance the order to **Folding** in the app

Phase 4 — Folding

1. Work from the cart at the folding table
2. Fold each item individually and **set it aside in a flat stack** — do not bag yet
3. If the customer sent their clothes in a **reusable fabric laundry bag**, that bag must have been washed in the load — fold it and set it aside with the rest
4. Continue until all items in the cart are folded and stacked
5. Before bagging, check for any **inserts** to include: promo cards, thank-you notes, gifts (see Step 9A)
6. Once everything is folded, stacked, and inserts are ready, **bag all items together**
7. Do not seal yet — labeling and the final check happen in Step 9

■ **Same-color warning:** The board shows a warning if two orders in the same phase column share a color key. The operator should flag this to admin — one order's color sticker may need to be re-labeled to avoid confusion during delivery pickup.

STEP 9 — Finishing: Label, Pack, Count, and Placement Photo

Who does it: Operator **When:** After all items are folded and stacked, before closing the bags **MANDATORY for every order**

A) Check for Inserts Before Closing the Bags

Before placing folded clothes into the bag, check if anything needs to go in with them:

- **Cards, promos, or gifts** — include any promotional card, thank-you note, gift item, or promotional material designated for this customer
- **Customer's own laundry bag** — if the customer sent their clothes in a reusable fabric laundry bag, that bag must have been washed along with the rest. Fold it and place it **inside the plastic delivery bag** with the clean clothes before sealing

■ Do not return an unwashed fabric bag. It came in dirty — it goes back clean.

B) Apply the Color Key Sticker and Label

1. Open the order card in the app — the **assigned color key is displayed** (e.g., "BLUE")
2. Write the **order number and bag number** on a sticker of that color for each bag — format: 11765-1, 11765-2, etc.
3. **Physically apply the sticker** to the outside of each bag, visibly. One labeled sticker per bag

■ The color was pre-assigned by the system at booking time. The same color used at pickup is reused here so the driver and operator can track the order consistently from start to finish.

■ The system will **block advancing to Ready** if no color key is confirmed. This is enforced.

C) Pack and Seal the Bags

1. Place the folded stack into the bag(s)
2. Include any inserts (cards, promos, gifts, washed fabric bag) — see section A above

3. **Vacuum the bag** — insert the portable vacuum nozzle and extract excess air until the bag compresses around the clothes
4. **Tie the bag shut** — knot it securely after vacuuming
5. Keep all bags for the same order together

■ Vacuuming removes excess air and keeps the package compact and clean for delivery.

D) Weigh the Sealed Bags

1. Place the tied, sealed bag(s) on the scale — weigh the complete order (all bags combined)
2. **Enter the folded weight in the app**
3. The app automatically compares this weight against the intake weight recorded at driver drop-off:
 - ✓ **Within 4 lbs** — normal, proceed
 - ■ **4 lbs or more difference** — the app raises a **red flag**. Stop and verify before proceeding: Check all items were processed; check folding area and cart for items left behind; if items are confirmed missing, note it and notify admin immediately. Admin will contact the customer before the order goes out.

■ A weight discrepancy of 4+ lbs likely means something was left behind. This must be resolved before the order is marked Ready.

F) Enter the Folded Bag Count

In the order drawer, enter how many bags the laundry was packed into after folding. This may differ from the original pickup count (customer brought 3 bags, folded it fits into 2 — that is normal). The driver's app will show the folded bag count when collecting.

G) Place the Order and Take the Placement Photo

If the order stays at the facility (floor holding):

1. Place the sealed, labeled bag(s) in the floor holding area
2. In the order drawer, confirm the destination is set to **Hold at Facility** (toggle ON)
3. Tap the **Take Photo** button — photograph the bags in their spot with the **color key sticker clearly visible**
4. Photo is saved and appears on the driver's screen when they come to collect

If the order is going to off-site storage:

1. Apply the **additional storage marker sticker** alongside the color key sticker on each bag
2. Place the bags in the designated off-storage area
3. In the order drawer, toggle **Hold at Facility OFF** — this marks the order as going to remote storage
4. Tap the **Take Photo** button — photograph the bags with **both stickers visible** (color key + storage marker)
5. Photo is saved to the order

■ The system will **block advancing out of Ready** if no placement photo exists. This is enforced regardless of destination (floor or storage).

STEP 10 — Floor vs. Storage Decision

Who does it: Operator **Where:** Facility Board order drawer

When: Immediately after the order is marked Ready. Every finished order needs a location decision.

Option A — Hold at Facility (Floor)

Toggle the **Hold at Facility** switch **ON**.

- Order stays in the floor holding area at the facility
- Driver will come directly to the facility to pick it up
- **Sticker requirement:** color key sticker only
- The card will show a hold pin icon on the board

Option B — Remote Storage

Toggle the **Hold at Facility** switch **OFF**.

- Order goes to remote/off-site storage
 - Driver must go to the storage location to retrieve it
 - **Sticker requirement:** color key sticker + **second marker sticker** (storage identifier — apply alongside the color key)
 - The order drawer will show an amber reminder: "Second marker sticker required"
- **Saturday pickups:** Decision pending on whether Saturday pickups automatically go to storage (since Sunday is off) or stay on the floor. Until decided, use your judgment and toggle accordingly.

STEP 11 — Driver Loads and Runs the Delivery Route

Who does it: Driver **Where:** Driver App → today's job list

The driver opens the app and reviews all jobs assigned for the day. Jobs show as either **Floor** (bags at the facility) or **Storage** (bags at the off-site storage location). The driver runs two separate loading stages before starting deliveries.

Stage 1 — Storage Run (First)

1. Review the job list — identify all orders marked as **Storage**
 2. Load the vehicle with any items already at the facility going to storage
 3. **Drive to the off-site storage location**
 4. Drop off the storage-bound orders — place them in their designated area
 5. Return to the facility
- Storage orders go first so the driver returns to the facility with an empty vehicle, ready for the full delivery load.

Stage 2 — Facility Load (Second)

1. Back at the facility, review all remaining jobs — these are the **Floor** orders ready for delivery
2. For each order, open the order detail in the app — the **Facility Specs** panel shows: Floor or Storage label; colored circle + color name; placement photo; folded bag count (warning if different from original pickup count)
3. Locate each order's bag(s) using the color sticker and placement photo
4. Verify the bag count against what the app shows
5. Load all delivery orders into the vehicle, keeping each order's bags together
6. Once fully loaded, mark each order as **Out for Delivery** in the app
7. Begin the delivery route

STEP 12 — Driver Delivers to the Customer

Who does it: Driver **Where:** Driver App

On delivery day:

1. Driver opens the app — sees all deliveries assigned for the day
 2. Navigates to each customer's address
 3. Finds a suitable, safe spot to leave the bags (door, porch, covered area, etc.)
 4. Places all bags for the order together in that spot
 5. **Takes a photo** of the bags in their delivery spot — the photo must show: All bags clearly; the delivery location; the color key sticker visible on the bags
 6. Marks the order as **Delivered** in the app — status moves to delivered, delivery photo saved to customer's viewable order record, customer receives delivery notification, order is closed out
- **Customer does not need to be home.** Per our terms of service, bags will be left in a suitable location at the delivery address whether or not the customer is present. The delivery photo serves as confirmation of placement.

If the clothes are not outside when the driver arrives (no-clothes situation):

1. Driver does not wait — makes note of the situation in the app
 2. Driver submits a **no-clothes report** in the app (notes field on the order)
 3. Admin is notified — contacts the customer
 4. A **revisit fee** applies for any return pickup trip required
 5. Admin reschedules the pickup and processes the fee before the next attempt
- The revisit fee exists because a failed pickup wastes a scheduled route slot. Customers agree to this when booking.

STEP 13 — Admin Closes Out / Follows Up

Who does it: Admin **Where:** /admin/orders or /admin/search

After delivery:

- Verify the correct status shows as *delivered*
- Review final amount — if weight was entered at drop-off, confirm the price reflects it
- Check for any tip recorded
- Flag any issue orders (damaged items, wrong bag count, customer complaint) for follow-up

If a customer reports a problem:

- Go to /admin/search → search by name, phone, or short code
- Open the order → review the full event log (every status change is time-stamped)
- The floor placement photo is on record — can be used to verify what was delivered

QUICK REFERENCE

Full Status Flow: Booking placed → confirmed → picked_up → in_progress → delivered

Facility Phase Flow: intake → washing → drying → folding → [color key + bag count + photo] → ready → staged → out_for_delivery

Who Does What

Task	Role	Where
Review & confirm new orders	Admin	/admin/dispatch

Assign driver to order	Admin	/admin/dispatch — order card
Reschedule an order	Admin	/admin/dispatch → Reschedule...
Check who is clocked in	Admin	/admin/schedule → Right Now
Add/edit routes	Admin	/admin/routes
Approve new workers	Admin	/admin/workers → Pending tab
Add worker to schedule	Admin	/admin/schedule → Schedule tab
Pick up laundry	Driver	/driver
Drop off at facility	Driver	/driver
Deliver to customer	Driver	/driver
Move order through phases	Operator	/operator
Assign color key	Operator	/operator (Facility Board)
Take placement photo	Operator	/operator (Facility Board)
Set Floor vs Storage	Operator	/operator (Facility Board)

Staff App Access

App	URL	Login method
Admin	/admin	Admin password
Driver	/driver	4-digit PIN
Operator	/operator	4-digit PIN
Staff Clock (in/out)	/staff	4-digit PIN
Test all 3 side-by-side	/admin/test	Auto-seeds test workers

■ PINs are set by admin at /admin/workers → click the worker → set PIN.
